

Training: one FF++ photograph $\rightarrow$ a triplet (every step)

$p = 0.5$ each branch; a beautified forgery stays *fake*

Inference on a beautified face

binary detector (one threshold t)

beautified genuine
called fake
(false accusation)

beautified deepfake
called real
(escape)

lowering t trades one error for the other

ours (three-way, argmax)

filter

genuine, edited:
not accused
