1 template (default; on device; also the fallback)
structured record
code template: decision, region, operations, calibration sentence
2 LLM wording + code numbers (server)
fact list, must-not-say
LLM writes words only
code adds score, calibration
3 routed questions (follow-up)
8 question chips
4 fixed answers by code (vs. original, identity, certainty, the score), shown without a model call
4 to the LLM: why fake, what changed, beautified?, why not real
11 checks
every text, before display
pass
shown
plain or expert, EN or ZH
fail
again
rewrite once, sampled
fail
template or code answer
